Mission

The Critical Threats team has been using open-source intelligence to generate factual analysis about ongoing conflicts and future threats since 2009. The integration of cutting edge technology into our analytic processes means that CTP anticipates threats long before they reach the headlines. Our new digital home gives members of the national security community not only a more dynamic tool for accessing reports, daily briefings, and other analysis of the world's many hotspots, but also a means to see the ways in which the conflicts and crises of the world relate to one another.

Iran | Yemen | Libya | Pakistan | Horn of Africa | Maghreb | Sahel

Coming soon: Mapping Room

An interactive collection of maps. View crises unfolding over time around the world. Explore and contextualize the data and our analysis.
