03/09/20	03/09/20	IAEA reports on Iranian uranium stockpiles and secret nuclear sites	The IAEA revealed that Iran's low enriched uranium has tripled since November to over 1 ton. The IAEA also revealed that Iran is preventing access to two additional nuclear sites. IAEA Director General Rafael Mariano Grossi called on Iran to cooperate immediately and fully with the IAEA and provide prompt access to locations which it has refused to let Agency inspectors visit. "The Agency has identified a number of questions related to possible undeclared nuclear material and nuclear-related activities at three locations that have not been declared by Iran," Grossi. "The Agency sought access to two of the locations. Iran has not provided access to these locations and has not engaged in substantive discussions to clarify the Agency's questions. This is adversely affecting the Agency's ability to clarify and resolve these questions and to provide credible assurance of the absence of undeclared nuclear material and activities in Iran.
